

uncorrected P-value

uncorrected coefficients plot

corrected P-value

The figure displays a scatter plot on a grid. The grid has vertical lines every 100 units and horizontal lines every 50 units. A prominent vertical line is drawn at x=260, and a horizontal line is drawn at y=730. There are two main clusters of data points, both represented by solid black dots.

- Top Cluster:** Located at y=270. It consists of two groups of points. The first group is on the left, spanning from x=40 to x=360. The second group is on the right, at x=400 and x=440.
- Bottom Cluster:** Located at y=730. It consists of two groups of points. The first group is on the left, spanning from x=270 to x=360. The second group is on the right, spanning from x=350 to x=960.

A horizontal number line with tick marks at -5, 0, and 5.
